

Water quality data availability online  
February 16, 2021

The Reserve has been transmitting water quality data from T-Wharf to the internet since 2006. Water quality parameters such as water temperature, salinity, dissolved oxygen, pH, turbidity, and depth are collected every 15 minutes and transmitted near-real time at [CDMO RTA \(sc.edu\)](http://CDMO.RTA.sc.edu). Sadly, our telemetry equipment at the T-Wharf was severely damaged by a recent winter storm. Reserve staff are working diligently to replace the equipment and resume transmitting data. Fortunately, data are still being collected at the site. For any data request, please contact Dr. Daisy Durant ([daisy.durant@dem.ri.gov](mailto:daisy.durant@dem.ri.gov)).
